

Carrot

Coral PIPING

1. Outline the right side of the carrot body.

Light Coral PIPING

2. Outline the left side of the carrot body.

Light Teal & Teal PIPING

3. Outline each leaf, piping just outside of the marked lines in order to hide them.

Light Teal & Teal PIPING

4. Pipe squiggles in each leaf. The support of thicker icing helps prevent flood "craters".

Light Coral FLOOD

5. Fill in the left side of the carrot working from the left edge in toward the wavy line.

Coral FLOOD

6. Fill in the right side, starting where the two sections join so they meld together.

Light Teal & Teal MEDIUM (20sec)

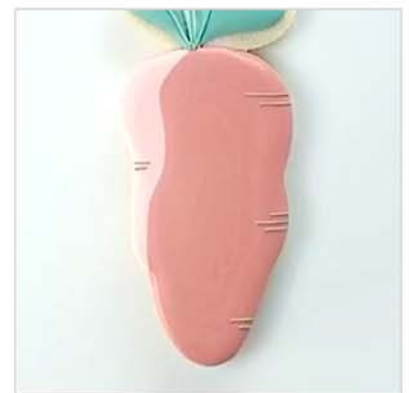

7. Fill in each leaf being careful the icing stays inside its outline.

(Allow to dry for at least 3-4 hours, or 20 minutes in a dehydrator)

Teal PIPING

8. Pipe a line down the middle of each leaf.

Medium Taupe PIPING

9. Pipe sets of parallel lines of different lengths to create the look of ridges.

Carrot (cont.)

Light Coral PIPING

10. Pipe a small cluster of little lines (tick marks) in a random pattern in the top-left.

Teal PIPING

11. Pipe a series of parallel lines in the left and right leaf.

ALL DONE!
